

RQ-4A Global Hawk Milestone - 1,500 Combat Flight Hours -

The USAF RQ-4A Global Hawk HAE UAV continues to perform in support of the United States efforts to rid the world of Global Terrorism.

Since the deployment in late October of 2001, first in support of Operation Enduring Freedom, and again deployed supporting coalition efforts in Operation Iraqi Freedom, Global Hawk has proven to be a significant contributor to the warfighter, providing valuable ISR imagery while reaching and exceeding the milestone of flying 1,500 hours in actual combat missions.

These accomplishments were reached through the contributions and dedication of the men and women of Northrop Grumman, the Global Hawk Subcontractor Team and the United States Air Force, whose efforts and support continue to pave the way for unmanned aerial vehicle technology.
